

Clarence St. Nor Sec

EXTRACT FROM
1923 REPORT BY WARDEN H. H. HUNGERFORD

June 22--Aug. 28.--Sept. 20

PRINCE OF WALES ISLAND

Karta Bay. Karta River is a fair sized stream, about 3 miles long, coming out of several large lakes.

There are reds and dogs showing June 22 when the stream guard was placed. All varieties of salmon spawn in the stream. The sockeye and coho go on into the lake to spawn later, in the streams running into the lake. On Aug. 28 dogs and humps were very numerous spawning in the stream.

On Sept. 20 dogs were still numerous spawning in the stream, and coho rather numerous in the holes on their way to the lakes.

This is a very important stream and should always have a guard if possible for at least 3 months. Fishermen in this locality are very numerous.
